Trees on the site

Template for the 1:500 site model

N

0 5 10 15 20 25 m · 1:500

Tree crowns by height

- Small · 3–6 m (99) — model height 6–12 mm
- Medium · 6–10 m (200) — model height 12–20 mm
- Large · 10–15 m (169) — model height 20–30 mm
- Very large · over 15 m (44) — model height over 30 mm

+ Tree top (crown centre) with number

? = check on site: may be the mill ruin

River and stream

Road

Mill

Contours every 2 m, index every 10 m

25 m reference squares (50 mm on the model)

Crowns are drawn as circles of the same area as each crown seen from above. From the October 2025 drone lidar: tree height = surface model minus bare-ground model, read from the survey images on the Lidar page (heights to about ±1 m). Trees of 3 m and over. Low scrub and hedges under 3 m are not shown. Where crowns overlap in woodland, the split between trees is an estimate. Origin: the survey's south-west corner. Print at 100% (actual size).

Transfer to the model

1 Line the frame up with the model's edges, north to north.
2 Prick through each tree centre with a pin.
3 Use the crown circle for the tree's spread and the schedule (or the grey band) for its height.
4 The 25 m squares help you check you are in the right place.

Gleniff Barytes Mill · Ballintrillick, Co. Sligo
